KEY STAKEHOLDERS **WITHIN** CARBON MARKETS

PART 1: PROJECT DEVELOPERS
A. Introduction and Workflow

Who are Project Developers in Carbon Markets

Group of people who come up with the idea and plan for a emissions reduction project are referred to as project developers.

Project Developers are usually the ones who start up carbon projects and run them, they often more than not get funding from Project Owners (to be discussed in the next post)

Project Developers Workflow

1

Scoping out projects

Developers start by looking for potential projects that can reduce or remove greenhouse emissions.

2

Project Feasibility Study

Developers conduct a feasibility study to assess the project's viability, including technical, financial, and environmental aspects.

3

Project Design

Design the project in detail, including planning the technology, processes, and methodologies to be used.

Project Developers Workflow

pt 2

4

Seeking Financing and Funding

Developers start by looking for potential projects that can reduce or remove greenhouse emissions.

5

Stakeholder Engagement

Developers engage with stakeholders, including local communities, governments, and partners, to ensure support and compliance.

6

Project Implementation

Developers execute the project plan, install technologies, and start the project operations.

Project Developers Workflow

pt 3

7

Monitoring and Verification

Developers continuously monitor the project's performance and have it verified by third parties to ensure it meets the required standards.

8

Reporting and Certification

Developers compile reports on the project's outcomes and get certifications for the carbon credits generated.

9

Issuance of Carbon Credits

Developers receive and manage the issuance of carbon credits which can be sold or traded in the carbon market.
